

Event-Driven PrEP Patient Counseling Checklist

- ED-PrEP does not have FDA approval in the United States though existing studies show that it may be just as effective in preventing HIV infections as daily dosing
- Only F/TDF (Truvada) should be used for ED-PrEP
- Only indicated for individuals who are MSM to prevent HIV infections that occur **sexually**
- ED-PrEP may cause more significant GI side effects
- It should not be used if the patient has HBV infection or does not know their HBV status

- Initial Dose: Take 2 pills 2-24 hours before sex
- Second Dose: Take 1 pill 24 hours after the initial dose
- Follow-up Doses: Take 1 pill 24 hours after the second dose (48 hours after the initial dose)
- If sexual activity continues, take 1 pill everyday and continue for 2 days after the last sexual event.
- Additional notes for follow-up doses:
 - If a gap of <7 days occurs between sexual event, take 1 pill everyday and continue for 2 days after the last sexual event.
 - If a patient has been off of PrEP for >7 days, restart the 2-1-1 cycle
