

PrEP Intake: Assessment for Acute HIV Infection

PrEP should temporarily be deferred if, in the past 4 weeks, the patient had:

Direct exposure of **EITHER**

- Mucosal site (eye, mouth, vagina, penis, rectum)
 - The bloodstream (non-intact skin, percutaneous)
-

With **ONE** of the following

- Blood
 - Fluids from the rectum / vagina / penis
 - Breast milk
-

That came from a source that is **ONE** of the following:

- HIV+ that is not taking any antiretrovirals
- HIV+ and a detectable HIV-RNA level in the past 6 months
- HIV status unknown

AND experienced **ANY** of the following, *unexplained by a more probable cause*

- | | |
|-----------------------------------|--|
| <input type="checkbox"/> Fever | <input type="checkbox"/> Joint and / or muscle aches |
| <input type="checkbox"/> Fatigue | <input type="checkbox"/> Sore throat |
| <input type="checkbox"/> Rash | <input type="checkbox"/> Cervical adenopathy |
| <input type="checkbox"/> Headache | <input type="checkbox"/> Night sweats |
